

WORKSHEET A.4.M3

Multimedia - Sound

What we will learn today:

- Use a microphone to record sounds
- Apply silence and trimming to audio
- Add new tracks in Audacity

Consolidation Activities

1. Connect your microphone to the computer.
2. Open Audacity. Make sure that the microphone is not muted.

Figure 1: Microphone volume

3. We will now record the word YES and your name. Press the Record button to begin. First say "YES", then press Stop. Save the recording as yes.aup.
4. Create a new Audacity file and repeat the process, recording your name. Save the recording as name.aup.
5. Open exampleM3_1.aup. Add a new track: Tracks → Add New → Stereo Track.
6. Copy the audio from yes.aup into the new track.
7. Using the Time Shift Tool, move the yes.aup audio to the right so that it answers the question "Do you speak English?" Also move the question "What is your name?" so that it begins after the answer "yes".
8. Add another track and copy the audio from name.aup into it. Move the name recording to the end, after the question "What is your name?" Save the project.
9. Export the project as an MP3 file named exampleM3_1.mp3.
10. Open theme.aup. Select the first 8 seconds of the audio on the second track (Lord) and apply silence: Edit → Remove Audio → Silence Audio.

11. On the first track (Game), select from the 8th through the 16th second and apply silence.
12. On the second track (Lord), select from the 16th second to the end and apply silence.
13. Save the file and export it as an MP3 named theme.mp3.
14. Open ucanttouchthis.aup.
15. Select from the 20th to the 22nd second. Apply trimming: Edit → Remove Audio → Trim.
16. Save the file and export it as an MP3 named ucanttouchthis.mp3.

Assessment Activities

17. Your folder contains interview.aup. Record your answers and create one continuous question-and-answer file. Export the result as an MP3 named interview.

+Additional Activities

18. Using excerpts from films in the films folder together with your own recordings, create your own MP3 file.
