

WORKSHEET A.4.M4

Multimedia - Sound

What we will learn today:

- Split and duplicate a selected part of an audio track
- Use the Fade In and Fade Out effects
- Change the speed and tempo of audio
- Reverse audio
- Download audio from YouTube

Consolidation Activities

1. Open the file mpaglamadakia.aup.
2. Split the audio at the 34th second: Edit → Clip Boundaries → Split.
3. Using the Time Shift Tool, move the second clip so that it begins at the 1-minute mark.
4. Open beat.aup. Copy the audio contained in the file and then close it.
5. Add a new stereo track to mpaglamadakia.aup. Paste the audio you copied into the new track. Move it so that it starts at the 34th second.
6. Save the file and close it.
7. Open your web browser (for example, Firefox) and go to youtube.com.
8. Choose a song. When it starts playing, you may press Pause.
9. Open a new browser tab and go to <http://www.youtube-mp3.org/>. This page can convert a YouTube video to MP3. Other similar websites can be found by searching for video2mp3.
10. Copy the address from the YouTube tab into <http://www.youtube-mp3.org/> and press Convert.

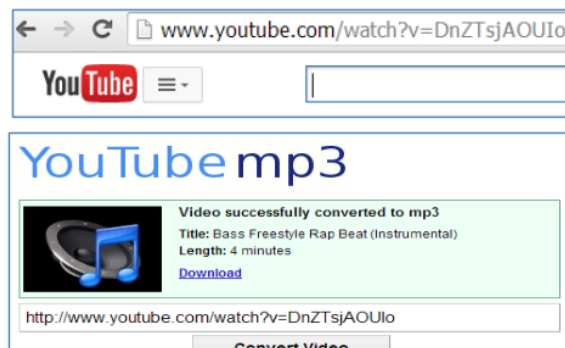

Figure 1: Downloading audio from YouTube

11. Click the Download hyperlink to convert and download the song.
12. Open the song using Audacity.
13. Select the whole song (Ctrl+A) or part of it and duplicate it: Edit → Duplicate.
14. Select the audio in one of the two tracks and reverse it: Effect → Reverse. What do you notice?
.....
15. Save the file as reverse.aup and then close it.
16. Open kamila.aup. Press Play and listen to the audio. When it finishes, press Stop.
17. Select the audio in the first track and reduce its speed: Effect → Change Speed.

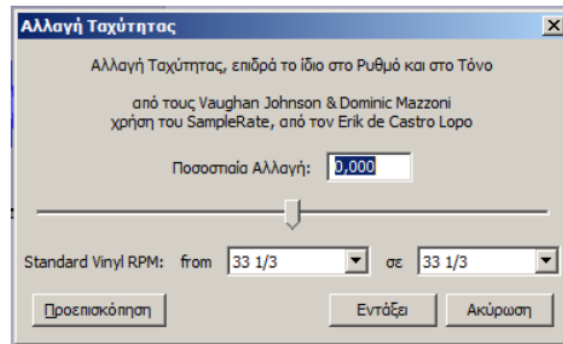

Figure 2: Changing Speed

18. Select the audio in the second track and increase its tempo: Effect → Change Tempo.

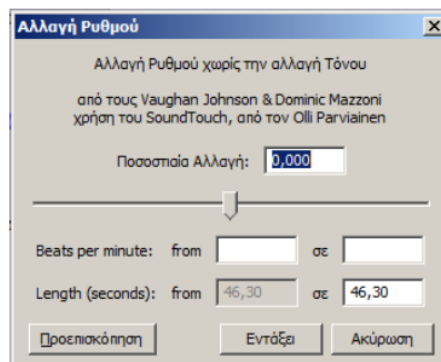

Figure 3: Changing Tempo

19. Listen to the result again. Save your changes and close the file.

20. Open mix.aup. You will notice that the songs in the two tracks overlap for a few seconds. We will gradually reduce the volume of the first song (fade out) and gradually increase the volume of the second song (fade in).

21. In the first song, select the section to which you want to apply fade out and choose Effect → Fade Out. Apply Fade In to the second song.

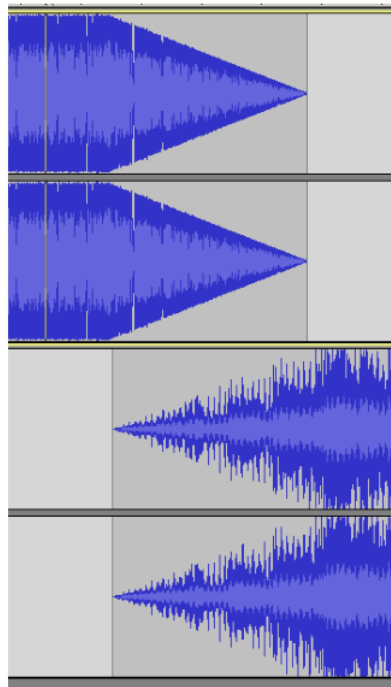

Figure 4: Fade Out - Fade In

22. Save the file and export it as an MP3 named mix.mp3.

Assessment Activities

23. Create your own mix using songs of your choice from YouTube.

+Additional Activities

24. Experiment with the effects available in Audacity.
