

WORKSHEET A.5.M5

Security, Interactive Communication Applications and Social Networks

What we will learn today:

- Explain the roles of antivirus, firewall and antispyware software.
- Name interactive communication applications such as Skype, Messenger and Viber.
- Describe the features, main advantages and disadvantages of interactive communication applications.
- Define a social network and give examples such as Facebook, Twitter, LinkedIn, Instagram and TikTok.
- Describe risks including phishing, cyberbullying and grooming.
- Explain ways to deal with these risks.

Consolidation and Assessment Activities

1. Match each software type in Column A with its role in Column B. Write the number from Column B in the empty box in Column A.

Column A - Software	Column B - Role
(a) Antivirus ☐	1. Software that allows or rejects data packets passing from one computer network to another.
(b) Firewall ☐	2. Detects attempts by an intruder to monitor our activity and read personal data, passwords and files.
(c) Antispyware ☐	3. Protects a computer from malicious programs.

2. On social-networking sites, we usually cannot publish our photos and videos.

(a) True (b) False

3. On social-networking sites, we usually cannot visit other users' pages.

(a) True (b) False

4. Depending on the interactive communication application, you may communicate using:
- (a) Voice (audio)
 - (b) Text
 - (c) Video
 - (d) All of the above
5. Most interactive communication applications also support advanced forms of communication, such as video conferencing.
- (a) True (b) False
6. Which three are interactive communication applications?
- (a) Skype (b) Facebook (c) Twitter (d) Viber
 - (e) Messenger (f) Instagram (g) LinkedIn (h) TikTok
7. Which five are social-networking sites?
- (a) Skype (b) Facebook (c) Twitter (d) Viber
 - (e) Messenger (f) Instagram (g) LinkedIn (h) TikTok
8. In an interactive communication application, we usually cannot define our own personal settings.
- (a) True (b) False

9. In an interactive communication application, we can usually add the people we want to communicate with to a contact list.

(a) True (b) False

10. On social-networking sites, we can usually create our own profile.

(a) True (b) False

11. Interactive communication applications use Internet services to let us communicate with people anywhere in the world.

(a) True (b) False

Open Phishing.mp4 from your folder, watch it and answer the questions below.

12. What is phishing and how is it carried out?

13. How can the risk of phishing be addressed?

Open Grooming.mp4 from your folder, watch it and answer the questions below.

14. What is child grooming and how is it carried out?

15. How can the risk of child grooming be addressed?

Open Cyberbullying1.mp4 and Cyberbullying2.mp4 from your folder, watch them and answer the questions below.

16. What is cyberbullying and how is it carried out?

17. How can the risk of cyberbullying be addressed?

Additional Activities

18. Visit <https://sxoleio.eu>. From this website, you can download and install security programs such as antivirus, firewall and antispyware software.

Note: You must log in as Administrator/Teacher on the laboratory computer.

Activities for Home

19. Using the Internet, find two other interactive communication applications not mentioned here and record their main features.

20. Using the Internet, find two other social-networking sites not mentioned here.
